

30-day cybersecurity learning roadmap for beginners with some basics, 1–2 hours daily

Cybersecurity — 30-day roadmap

Some basics · 1–2 hrs/day · Beginner-friendly

30 days 4 projects

[Week 1 — Foundations](#) [Week 2 — Networking](#) [Week 3 — Offense](#) [Week 4 — Defense](#)

Security foundations & Linux basics

Days 1–7 · Build your mental model of how security works

DAILY TASKS

Day 1–2 CIA triad, attack types & threat actors	Day 3 Linux command line essentials	Day 4 Kali Linux VM setup & orientation	Day 5 Cryptography basics (hashing, TLS)
Day 6 Password security & authentication	Day 7 Review + quiz yourself on week concepts		

RESOURCES

Platform	TryHackMe — Pre-Security path	Video	Prof. Messer Security+ free course
Practice	OverTheWire: Bandit (levels 0–10)	Reading	Linux Journey (linuxjourney.com)

WEEK PROJECT

Home lab setup

Install VirtualBox, set up Kali Linux, and document your environment in a README. Create a cheat-sheet of 20 essential Linux commands.

Final outcome after 30 days

Solid understanding of how attacks and defenses work

Hands-on practice with real tools (Nmap, Wireshark, Metasploit)

Completed CTF challenges and a home lab setup

Ready to pursue CompTIA Security+ or CEH certification

Portfolio with documented projects to show employers
